

KEYSTONE

DESIGN INTENT:

The *Keystone* conferencing series is designed to address the changing dynamics of modern conference rooms. Advanced functionality and stylish lines converge to foster exceptional value in a single component that fulfills multiple needs. Anticipating the use of multiple presentation formats and technologies, *Keystone* tables facilitate individual presentations and group discussions.

Articulating wings shift seating postures to optimize interaction with a meeting leader, other participants, or a presentation screen. Convergent extensions accommodate up to six additional seating positions.

Centered Adjustment

Proprietary gear mechanism maintains a symmetrical configuration as the articulating wings are opened or closed. This mechanism keeps the table's orientation centered in the room as the wings are shifted.

Keystone Surface

Primary Surface

Surface Colors

Separate laminate color selections can be made for the Primary Surface, the Keystone Surface, and the Extension, if applicable.

Technology

Keystone provides AC power and supports direct installations of voice and cat 5 data.
